Contour Measuring System

CONTRACER CV-2100 Series

Remarkable operability and functionality revolutionize contour measuring systems and enable measurement that is fast, accurate, and easy
Functions are redesigned based on thorough analysis of all contour measurement operations, enabling measurement that is fast, accurate, and surprisingly easy.
New functions to reduce operator workload are actively pursued and functions are blended to deliver a speed performance unimaginable for a standard model.

A jog shuttle covering a wide speed range is equipped as standard. The drive unit can be moved easily to the measurement position by using the jog shuttle.

The operation flow is significantly shortened by arranging the switches for stylus position change, measurement start/stop, and return on the front of the drive unit. These operations are required for every single operation cycle. This centralized panel can therefore reduce the workload of operators and improve measurement efficiency.
The quick-vertical-motion stand allows operators to swiftly and easily move the drive unit to and from the measurement height without having to push or pull. Moreover, this stand is equipped with a stop for quick repositioning to the measurement height, which ensures an easy and highly efficient measurement flow.

By enabling faster X-axis movement and enhancing the stylus up/down functions, the drive unit can return to the measurement start position after auto-displacement of the stylus. This is especially useful when multi-location (multiple-unit) measurement is being executed by a part program.
The combination of high accuracy and excellent operability allows flexible support of a wide range of measurement needs.

"Pursuing high accuracy is our mission"
Introducing a new highly accurate digital scale

The detector unit (Z1-axis) is equipped with a highly accurate arc scale. This scale directly tracks the arc locus of the stylus tip so that the most accurate compensation can be applied to the scale output, which leads to higher accuracy and resolution.

Measurement range of detector: 50mm
Accuracy: \( \pm (2.5 + |0.1H|) \) μm, where \( H \) is displacement from mid-range position (mm)
Resolution: 0.1μm (over entire measurement range)

Easy setup for highly accurate and efficient measurement

The highly accurate digital arc scale not only improves measurement accuracy, but can also be set up easily.

Operators are free from bothersome operations such as measurement magnification switching and calibrating each magnification as required for analog instruments.
X-axis inclination mechanism is a standard feature

The CV-2100 series* is equipped with a drive unit inclination mechanism that enables inclined-plane measurement without changing settings.

* For CV-2100N4, a manual column stand No.218-042 (refer to page 13) is required (optional).

Inclination angle (MAX): ±45°
(For CV-2100M4)

A range of options available according to the application

CV-2100N4

Desktop PC

CV-2100M4

Manual column stand for CV-2100N4 *2

*1: If the CV-2100N4 is operated without the dedicated manual stand, the measuring range of the Z-axis might be reduced, depending on the installation conditions. If you are considering using the CV-2100N4 without the stand, contact your local Mitutoyo sales office for advice.

*2: Optional accessories (refer to page 13).
Contour Analysis Software: FORMTRACEPAK

FORMTRACEPAK functions offer total support for measurement system control, surface roughness analysis, contour analysis, contour tolerancing, and inspection report creation.

Measurement control

To make only a single measurement, you can create a part program in the single mode. To measure multiple workpieces of an identical shape, you can use the teaching mode. Since you can embed the entire flow, from making measurement to printing a report into a part program, you can efficiently make measurements, analyze data, and output a report. A function is also provided that enables you to insert comments accompanied with photographs at desired timings, enabling you to embed the roles described in a measurement procedure document that specifies important points such as work settings.

Multiple language support (15 languages)

You can switch the language* to be used in the measurement, analysis, and layout windows. After measurements have been made, you can switch to another language and create a report in that language. This function can be used worldwide.

* Supported languages: Japanese, English, German, French, Italian, Spanish, Polish, Hungarian, Swedish, Czech, Simplified Chinese, Traditional Chinese, Korean, Turkish, Portuguese.

Online help function*

Online help that can be viewed any time is incorporated into the software. In addition to index and keyword searches, a status saving help button, which displays menus and Windows help with a click of the mouse, is provided.

* Online help function supports only Japanese and English.

Button-editing function

You can hide buttons that are not used frequently. For example, you can choose to display only those buttons that are used frequently and increase the size of the displayed graphics window, thereby customizing the window to suit your needs.
**Contour analysis function**
A wide variety of commands, which form the basic elements for analysis, are provided, including those for points (10 kinds), lines (6 kinds), and circles (6 kinds). A rich set of commands that combine these elements to calculate angles, pitches, and distances, a contour tolerancing function, and a design value generation function are also provided as standard features. These functions, combined with the function that allows you to customize the calculation command buttons by hiding less frequently used commands, let you tailor the window according to the user environment.

**Circle and line automatic determination function**
Using the circle/line auto-fitting command, you can automatically calculate all circles and lines contained in the data without having to click the command button each time.

**Removal of abnormal points function**
Irregular defects in the data are filtered out from the calculation. This function is effective when specifying the calculation range for locations at which the boundary between circle and line is difficult to determine.

**Text output of the calculation result and graphics data**
You can output the calculation result as text (in csv or txt format), output graphics data obtained from measurements as point-string data to a text file or CAD file (in the DXF or IGES format), or copy the data to the clipboard. Combined with commercial document or statistical processing software, this feature can be used to share data with computers that do not have dedicated analysis software installed or execute CAD-based reverse engineering.

**Contour-tolerancing function as a standard feature**
The best-fit processing function that moves the coordinate values of the design data and measurement data to the optimum positions is provided as a standard feature. Measurement results can be displayed as graphics that show deviations of the measured contour from nominal with the tolerance values expanded in each coordinate for easy comparison. Results can also be output as a text file, or utilized as feedback data for machining systems.

**Simple pitch calculation function**
You can efficiently analyze the pitch between identical shapes, such as a screw pitch or the distance between circles (center-to-center pitch), by simply specifying the desired range using mouse operations.

**Contour Analysis**

**Example of range specification for screw thread pitch with rectangular tool.**

**Example of contour-tolerancing result in graphical form**

**Example of contour-tolerancing results output as numeric values**
Contour Analysis Software: FORMTRACEPAK

Contour Analysis

Design value generation function
You can generate design data from CAD data (DXF or IGES file) or text data. Furthermore, since you can also convert measurement data into design data, you can save parts data prior to use (testing) as design data and effectively utilize it for checking the wear following use (testing).

Data combination function
You can combine partial data collected separately from a workpiece (made necessary due to shape characteristics) into a single graphic for convenient analysis.

Calculation command repetition setting
When identical shapes have the same pitch, you can analyze all of the shapes in a batch by specifying a single analysis location and the pitch.

Best-fit processing function for measurement point strings
This function tries to fit the measurement points to the stored reference data on the same coordinate system. It can eliminate the effects of a shift that may occur when setting the workpiece during automatic analysis.

Data superimposition command
You can superimpose two sets of data by detecting their characteristic points. Use the mouse to drag and move the measurement point strings to the desired positions to be superimposed.
Integrated layout

You can use simple operations to lay out graphics obtained from measurements as well as measurement results for surface roughness, contour, and roundness on a single page. Furthermore, since the program now allows you to specify a saved file and paste it, you can easily paste results from multiple files.

Note: the optional ROUNDPAK roundness/cylindricity analysis program is required. (Ver. 7 or higher)

Element information bar
This bar displays the attribute values of the pasted items, allowing you to easily check the contents of the pasted measurement data files.

System layout printing
By simply selecting the items to be output, you can automatically lay out the page to be printed. Use this feature when you wish to simplify the printing task.

Element insertion bar
Using the mouse to drag and drop the analysis content displayed in the element insertion bar, you can paste it into the layout. From the contour analysis result, you can also select the analysis result for a circle or line alone and paste it in position.

Saving the result as a web page
Since you can save the result in html or mhtml format, which can be displayed using Internet Explorer or Microsoft Word, you can check the result even on a PC on which no layout-editing program is installed.

Report creation function
You can freely assemble measurement results/conditions/graphics as well as comments/circles/lines/arrows, and print them out in a measurement result report. Furthermore, since you can paste bitmap files, you can also add a workpiece image or company logo to the layout. You can also save the created layout and use it again later for similar measurements.
Optional Accessories

3-axis Adjustment Table: 178-047

This table helps make the adjustments required when measuring cylindrical surfaces. The corrections for the pitch angle and the swivel angle are determined from a preliminary measurement and the Digimatic micrometers are adjusted accordingly. A flat-surfaced workpiece can also be leveled with this table. By using Mitutoyo’s 3-axis adjustment table, the workpiece can be aligned and leveled easily, simply by following the FORMTRACEPAK guidance. No experience or special expertise is required.

Table and fixture systems

- Leveling table: 178-043-1 (mm), 178-053-1 (inch)
- Digital Leveling table: 178-042-1 (mm), 178-052-1 (inch)
- Leveling table: 178-016
- Leveling table (for D.A.T.): 178-016
- Calibration stand: 12AAG175
- V-block: 998291
- Precision vise: 178-019
- Cross-travel table: 218-001 (mm), 218-011 (inch)
- Cross-travel table: 218-041 (mm), 218-051 (inch)
- Rotary vise: 218-003
- Center support: 172-142
- Center support riser: 172-143
- Swivel center support: 172-197
- Holder with clamp: 176-107
- V-block with clamp: 172-234, 172-378

*1 Required for calibrating in bulk by mounting straight arm/small-hole stylus arm without using cross-travel table and Y-axis table.
Optional Accessories

Manual column stand for CV-2100N2

218-042 *Except measuring unit (CV-2100N2)
Vertical adjustment range: 320mm
Inclination angle (MAX): ±45°
Dimensions (WxDxH): 600x450x740 mm
Mass: 110 kg

* Quick-vertical-motion function is not available

Vibration isolators (Desktop types), floor stand and tables

Vibration isolators (Desktop types)

Desk types

Monitor arm*1 12AAK120
Desk type 12AAK110
Side table*2 12AAL019

Example combination: with monitor arm but no side table*2 (tester and PC not included)
Example combination: with a side table (tester and PC not included)

*1 Used together with vibration isolator (12AAK110).
*2 User to provide a printer rack.

Whatever your challenges are, Mitutoyo supports you from start to finish.

Mitutoyo is not only a manufacturer of top quality measuring products but one that also offers qualified support for the lifetime of the equipment, backed up by comprehensive services that ensure your staff can make the very best use of the investment.

Apart from the basics of calibration and repair, Mitutoyo offers product and metrology training, as well as IT support for the sophisticated software used in modern measuring technology. We can also design, build, test and deliver bespoke measuring solutions and even, if deemed cost-effective, take your critical measurement challenges in-house on a sub-contract basis.

Note: Product illustrations are without obligation. Product descriptions, in particular any and all technical specifications, are only binding when explicitly agreed upon.
